

The project is based mail automation. In this RPA is to be developed to send email automatically. Also It should be possible to attach email.

for this

1. A process "Mail Automation is created"
2. in process two action blocks are dragged.
3. first block is used to set up pop address smtp address and their port numbers. Whole action is known as "configure"
4. Section action block is used to send mail. It has fields like sender and receiver address, subject, body of msg, and attached file path.
5. For attachment collection block is used, In this block we can add the path of file to be attached.
6. Finally process is published
